TO: Minerals File

FROM: Anthony A. Gallegos, Reclamation Engineer *aag*

RE: Site Inspection, Vernon Coltharp, ML 36721, S/047/031, and American Stone, ML38734, S/047/046, Uintah County, Utah

Inspection Date: August 22, 1991  
Inspection Time: 1030-1140  
Conditions: Partly cloudy, warm  
Participants: Tony Gallegos, DOGM

These two sites are located adjacent to each other along the east bank of the Green River. The purpose of this inspection was to evaluate the condition of these sites.

There were a variety of small disturbances in the general vicinity of these sites (T6S, R21E, Sec. 36, SLBM). Division records indicate the mineral ownership at these sites is with State Lands. These disturbances consisted of small trenches or pits and various piles of gravels. None of these disturbances showed signs of recent activity. Furrowing was evident in various portions of the site which may have been due to revegetation work. A large white tank was the only equipment located in this area. A large diameter steel pipe with a covering welded over it is located near the river bank.

Without knowing the exact boundaries of the two adjacent sites it is difficult to estimate the disturbed area associated with each, but there appeared to be less than 10 acres of combined disturbance. The actual amount of total disturbance is estimated at 5 acres or less. Photographs were taken to document the current status of the sites.
